Description

Runcorn Burh. Founded by Aethelfleda, lady of the Mercians, in the 10th century. Site not exactly known but considered to be the Castle Rock, the promontory jutting out into the River Mersey, removed to improve navigation and construct the railway viaduct. In 1845 described as a triangular piece of ground cut off from the land by a ditch, 6 yards wide (1). There are plans showing the area before the railway (2) and (3). Placename evidence suggests there may have been a Norman castle here for a short period (4). The area has now been destroyed by bridge building and other industrial workings (4). Built c.912 by Aethelflaed at the same time as Eddisbury in response to presence of Norse fleet in Irish Sea (5).

Description

Old Locks built 1772-73 ran between later Waterloo Bridge and Docks on the Bridgewater Canal. Entrance lock from the Mersey survives but other ten in staircase pairs are filled in. Total full 70ft (21.6m). New locks built in parallel 1825-7 but also filled in, little visible (1). Subject of land reclamation scheme in 1987/8 by Halton Borough Council and Cheshire County Council. Trial trenching revealed stone lock basins intact and filled with wrecked canal boats (2).

Summary

Clifton Village appears in the Domesday Book and there are frequent references to it throughout the medieval period.

Medieval and later villages were abandoned by their inhabitants for many reasons. The effects of disease and poor harvests made rural living difficult, and whole communities are thought to have relocated to urban settlements. Landowners sometimes relocated settlements for aesthetic reasons and for landscaping. Once abandoned the villages quickly became derelict and were not inhabited again surviving only as earthworks, often visible only from aerial photographs. They can also be identified by documentary evidence or the presence of a church where there is no settlement.

Description

Clifton Village in Domesday Book and with frequent references throughout medieval period (1).

Summary

Site of a Deer Park, associated with the mansion at Rock Savage and probably with the earlier Clifton Hall. It is Shown on Speed's map of Cheshire, 1611 and there are a number of documentary references to the park. It has been disparked for a long time.

Description

Deer Park associated with the mansion at Rock Savage and probably with the earlier Clifton Hall. Mentioned in Inquisition Post Mortem of Thomas Savage 1636. Long disparked (1). Numbers of references to this park occur in the Cholmondeley papers, Cheshire Record Office. Shown on Speed's map of 1611 (4).

Description

Halton Brow. Construction work on new estate produced Roman pottery. Subsequent excavation, where it was possible, revealed a flat bottomed V- shaped ditch, 4ft deep. Ditch proved on three sides of an apparently rectangular enclosure, best preserved on the north-west. Area enclosed c.1 acre. No structural evidence inside (1) and (2). Considered as Roman military site by Richmond (3). Excavations in 1967 by Manchester University revealed a single ditched enclosure, an irregular pentagon in shape, enclosing a larger area of c.3.1/2 acres. No rampart or internal features. Pot suggested occupation from during 2nd and 3rd centuries. Suggested site was agricultural in nature (3).

Status and other references

Original Reference Number - 104/0/3

Description

Evidence of small-scale quarrying revealed to rear of Rock Farm. Minor excavation by Patrick Greene 1973. A long, roughly rectangular quarry pit was excavated, 13m x 2m & up to 1.1m deep. Channels 0.2 - 0.5m had been cut into the stone with metal tools which left diagonal marks on the sides of the channels, which were V-shaped in section. The stone must have been split along its bedding plane by driving metal wedges horizontally into the rock face. In this way a face could be worked back, resulting in the rectangular shape of the quarry pit. Pottery found in the bottom of the pit indicated that it went out of use in the late 15th or early 16th century. Some of material may have been used in Rock Farmhouse believed to date from C15/early C16 (1) & (2).

Description

Runcorn Church. Built on a rock overlooking the River Mersey. Origins are perhaps late Saxon associated with the burh. In the late 11th century, Nigel, Baron of Halton, gave the church to his brother, Wolfrate. Leycester, in 1676, describes it as an ancient church (1). Now replaced by a new church of 1849 by Salvin. Full architectural description (2). Good series of monuments to the Brooke family (3). Had two priests in Domesday, which suggests it was an episcopal centre in Late Saxon times, with 20 dependent townships. May also have been a centre for the cult of St Bartelin. Was originally the site of the Augustinian priory, founded in early C12, but moved to Norton in 1133 (6).

Listed Building (II) - 56026	23/04/1970	

Summary

Grade II listed remains of an 18th Century Mansion. A mansion was built in 1565 for Sir John Savage, to replace an earlier Clifton Hall. Rock Savage itself was replaced by a later building in the 18th century and by 1782 this was deserted and falling into ruin. Now only fragments of sandstone walling survive. A reference of 1851 refers to the remains of a large formal garden of Elizabethan date and records show that a gateway with side turrets existed in 1811.

Description

Rock Savage. A mansion begun in 1565 for Sir John Savage, built to replace an earlier Clifton Hall. Rock Savage itself was replaced by a later building in C18 and by 1782 was deserted and falling into ruin. Now only fragments of sandstone walling survive(1). A reference of 1851 refers to the remains of a large formal garden of Elizabethan date (2). Gateway with side turrets existed in 1811 (3). Illustration of ruinous gatehouse as it appeared in C18 (5) .

Listed Building (old) (II) - 2/142

Summary

Grade II listed farmhouse built in the early 17th century. It was later altered between the late 17th and mid 19th century. It has a brick-nogged oak frame which has been partly rebuilt in brown brick with a graded grey slate roof. Wood was in plentiful supply as a building material in Britain until the 17th century. It was therefore the most practical material for house building. Timber framed buildings consist of a wooden framework (usually oak) that was infilled to create solid walls. Infill material used included wattle and daub, lath and plaster, brick and weather board. Brick nogging, (brick infill) was often used in the 17th and 18th centuries to replace earlier wattle and daub or lath and plaster infill as it was longer lasting.

Description

Marshgate Farmhouse. Early 17th century, altered later 17th-mid 19th century. Brick-nogged oak frame partly rebuilt in brown brick, graded grey slate roof. Long oak-framed wing, partly rebuilt in brick, has small- framing of heavy timbers (1). Full architectural description (1) and (2).

Summary

The Sankey (St.Helens) Canal was the first artificial waterway in England. It was the pioneer of the Canal Age in England. It was built to carry coal from St Helens to the Mersey and then onto Liverpool. It ran from the upper limits of the navigable Sankey at Sankey Bridges to Haydock and Parr. It was authorised by an act of 1755 and opened in 1757. It was later extended to Fiddler's Ferry in 1771 and to Runcorn Gap (Widnes) in 1833. It eventually had 10 sets of locks.

Description

Sankey Brook (St.Helens) Canal: authorised by act of 1755, opened in 1757 at a cost of L 18,600. First artificial waterway in England. Built to carry coal from St Helens to the Mersey and thence to Liverpool. Ran from upper limits of navigable Sankey at Sankey Bridges to Haydock and Parr. Extended to Fiddler's Ferry in 1771 and further to Runcorn Gap (Widnes) in 1833. Eventually had 10 sets of locks (1). Pioneer of the Canal Age in England (4).

Description

A chemical weapons production factory facility set up immediately before WWII, located on the east of Wigg island between the Manchester Ship Canal and the River Mersey. Access is by a swing bridge at the west end of the island. Factory constructed in 1938 for the production of arsenicals and cyanides for aircraft and ground bombs. Manufacture ceased in 1945, although site maintained by ICI until 1956. From 1956-61 site used for destruction of UK's mustard stocks. Equipment decontaminated and dismantled 1961. 1969 remaining derelict buildings flattened, buried in concrete and covered with up to 10m of soil. Site now a landfill site, plans to cover works by a depth of 30m. Two buildings remain - one used to house a bulldozer/digger, other is a derelict former electricity sub station(1).

Summary

World War II Heavy Anti-aircraft gunsite at Sutton Weaver. The site consists of 5 gun emplacements, the command post, 2 garages with maintenance bays and a generator building. There was also accommodation for the staff in huts to the south of the complex, but these have not survived.

The station was first mentioned in 1940 and by 1942 it was armed with four 3.7in guns supported by GL MkII radar and manned by the Home Guard. It was not retained for use after 1945. The gun emplacements are arranged in an arc around the SE and SW sides of central command post and four of these survive as concrete octagonal open pens, with concrete roofed boxes used to store ammunition and a concrete roofed shelter. The concrete command post occupies the centre of the site and is partly below ground.

This well preserved site is a Scheduled Monument.

Description

World War II Heavy Anti-aircraft gunsite at Sutton Weaver (Station H18 or Sutton). Site consists of 5 gun emplacements, command post, 2 garages with maintenance bays and a generator building. Billeting for staff was in huts to south of complex, but these have not survived. Station first mentioned Feb 1940. In June 1942 it was armed with four 3.7in guns supported by GL MkII radar and manned by the Home Guard. Not retained after 1945. Defence focus was Weaver Navigation and Manchester Ship Canal. Gun emplacements are arranged in an arc around the SE and SW sides of central command post. 4 of the emplacements survive as concrete octagonal open pens, with concrete roofed boxes used to store ammunition and a concrete roofed shelter. Concrete command post occupies centre of the site, partly below ground and still retains electrical fittings and hardboard wall lining. The radar was probably situated 20m to the N on a brick revetted platform. To NW and NE of the command post are 2 brick-built openbays, associated with a concrete garage. 40m to the command post is a large concrete roofed building with garage bay doors - used to house a generator. Site is surrounded by its original concrete posts which used to support a wire-mesh fence. This site is exceptionally well-preserved (1).

-----------------------------	---------------	--------------

Summary

A road was traced north-east from Chester to connect with the northern road through Warrington (Route 70b) at the Roman settlement at Wilderspool. Traces of it were found at junction of Birkenhead Road and Parkside Road in Chester. It was then thought to run via Brook Lane to Hoole Bank. It then follows the road to Bridge Trafford where the agger (Roman road embankment) can be seen alongside at a few points. It is likely that a road linked the Legionary fortress with Wilderspool and the river crossing there. While there are convincing road lines as far as Bridge Trafford, and from Preston on the Hill to Wilderspool, the intervening terrain is not suited to straight alignments and as such the road there has not been identified.

Summary

United Alkali chemical works in Widnes operating during the Great War producing Ammonium Nitrate and Acetone for the production of explosives.

Description

United Alkali chemical works in Widnes operating during the Great War producing Ammonium Nitrate and Acetone. It produced the Acetone by the destructive distillation of wood, and was remote from the supply plant in contrast to earlier Acetone factories. The Acetone was used as a solvent for the production of Cordite MD and other products such as tear gas. Exact position is not known (1). It is possibly the Marsh Alkali Works [CSMR: 4241/4/0], however there are many chemical works marked on the historical OS maps for the area.

Summary

Millbrow Quarry marked on the Ordnance Survey 25inch to one mile map, First Edition. The Cheshire version shows the quarry still in use, however by the time that the Lancashire map is surveyed the quarry (which appears to be much larger) is disused.

Description

Millbrow Quarry marked on the Ordnance Survey 25inch to one mile map, first edition. The Cheshire version shows the quarry still in use, however by the time that the Lancashire map is surveyed the quarry (which appears to be much larger) is disused. According to (3) this quarry was founded about 1798 by Mr Grindrod and had ceased to be used as a quarry by 1840.

Summary

Congregational Chapel, superseding St Luke's Chapel on Mason Street, built in 1834. Built at the expense of John Tomkinson of Liverpool, a quarry owner who supplied the stone for the Liverpool Custom House and St George's Hall. The foundation stone was laid 25 August 1834, and the building completed by 29 September 1835, at a cost of £6,000. The chapel remained Tomkinson's property until 1851, when financial difficulties obliged him to sell it to the congregation. The interior was severely damaged by fire in 1891.

The Chapel has walls of sandstone ashlar and a slate roof and was demolished c.1976, now lying under Runcorn Bus Station.

Description

Congregational Chapel superseding St Luke's Chapel on Mason Street [CSMR 4473/2/0] built in 1834. Built at the expense of John Tomkinson of Liverpool, a quarry owner who supplied the stone for the Liverpool Custom House and St George's Hall. The foundation stone was laid 25 August 1834, and the building completed by 29 September 1835, at a cost of £6,000. The chapel remained Tomkinson's property until 1851, when financial difficulties obliged him to sell it to the congregation. The interior was severely damaged by fire in 1891.

The Chapel has walls of sandstone ashlar and a slate roof. The body of the chapel is of four bays with two tiers of windows of two lights with rectangular labels, two-stage buttresses, and a battlement parapet which continues up the front and rear gables. The South front has a central porch of two storeys enclosing the gallery staircase and lower porches to each side. A vestry bay at the North end, also dated 1835, has a plain parapet and two shields to the North carved with grotesque heads. All the windows have cast-iron frames.

The interior has a continuous round-ended gallery supported by cast-iron columns of quatrefoil section. An organ recess with plaster barrel-vaulted ceiling was constructed behind the pulpit c1891 replacing first and second-floor rooms at the North end. The roof is supported by three trusses and is ceiled at collar level. It was demolished c.1976 and now lies under Runcorn Bus Station (1).

Description

In November 1884, Warrington newspapers described a road found at "Big Pool", Runcorn, 18 inches below surface, dipping to 4ft towards pool. Proved 10ft wide and paved with boulders. Pointing towards Weston but buried by Bridgewater Canal embankment. Papers conclude it to be Roman, Watkin later (1).

Description

Cromwell's Bank. SJ 54458558 to SJ 55098545. Sinuous linear bank with gaps, probably the result of weaker portions being washed out by high tides. Situated on Cuerdley Marshes, an extensive area of flat & low lying ground split by small creeks & also subject to flooding by the Mersey. Function probably not defensive, but protection from high tides. Age uncertain (1). Cromwell's bank not mentioned in Civil War survey of the area (2). Classified by VCH as defensive or non-defensive work which cannot be classified without difficulty from outward appearance (3). Probably medieval flood bank. A short stretch of bank survives c.6ins high. Air photos show the bank as a discontinuous bank bounding ridge & furrow to the north. Bank probably built in connection with ridge & furrow to protect it from flooding in this low lying area. The ridge & furrow and bank are possibly 13th or 14th century (4). Encloses parcels of ridge and furrow, sketch map and description (5).
